SUMMARY

Senior software engineer with nearly five years of experience building full-stack web applications, enterprise systems and AI-driven applications for clients across ASEAN. Works mainly in PHP and Laravel on the backend, and across React, Next.js, Svelte, Angular and Ionic on the frontend. Takes projects from architecture through to deployment, most recently as the sole engineer of an AI-focused division reporting to the CTO.

EXPERIENCE

IGCY (Alturian group) | South Jakarta, Indonesia | Jan 2024 – Present

Software Engineer Specialist | Mar 2026 – Present

- Sole engineer in the AI-based project division, reporting to the CTO. Plan, build and deploy AI-driven applications for clients and for the company's first in-house product.
- Designed and built an interactive mall directory for a major retail group in Malaysia, live in production across several malls: server-side multi-floor routing (Dijkstra) through lifts, escalators and stairs, a 2D map (Leaflet) and a 3D view (three.js), in English, Malay and Chinese.
- Built the directory's admin panel so mall staff maintain it without engineering support: visual waypoint editor, 3D geometry editor, floor-plan designer (React, TypeScript), and tenant, advertisement and kiosk management.
- Built customer-service chatbots for retail and service clients that read live business data to answer questions.
- Implemented document-processing pipelines that combine OCR with language models for extraction and classification, and retrieval-augmented (RAG) assistants over company documents.
- Integrated OpenAI, Anthropic Claude and Google Gemini behind Laravel backends, choosing the provider per project. Refactored a conversation-classification job to batch requests and remove repeated calls, lowering token usage.

Senior Software Engineer | Mar 2025 – Feb 2026

- Delivered mid-to-large client systems as an individual contributor using Laravel and Angular, among them HRIS, recruitment, ERP, merchandising and loyalty.
- Took an internal HRIS to completion for about 80 employees: attendance, leave, KPI monitoring, payslips and org chart, an employee PWA built with Angular and Ionic, and an admin dashboard with role-based access control.
- Built a recruitment platform with AI-based CV parsing that extracts candidate details, work history and skills from uploaded documents. Live in production.
- Designed system architecture and technical workflows for new projects, and guided teammates through code review and design discussion.

Junior Software Engineer | Jan 2024 – Feb 2025

- Built features for a retail loyalty application and its admin dashboard: points, rewards and member tiers.
- Worked on a merchandising application for a grocery client, covering inventory and stock workflows.
- Started on the HRIS and recruitment platforms in Laravel and Angular, taking on larger features over time. Helped with small maintenance on a custom frameworkless ERP.

The Prime | Cianjur, West Java, Indonesia | Aug 2022 – Dec 2023

Back End Developer | Aug 2022 – Dec 2023, **Mobile Application Developer** | Nov 2022 – Feb 2023

- Built REST APIs and backend features in Laravel for clients ranging from local businesses to government-affiliated organisations, handling up to five active projects in a month.
- Delivered backends for a regional transport app with ticketing and top-ups, an e-commerce and inventory system, and a teacher assignment platform for a Ministry of Education unit.
- Integrated payment gateways, notification providers and digital product (PPOB) APIs. Designed database schemas and optimised queries.
- Built cross-platform Flutter apps using BLoC and GetX, including a train booking app commissioned by the South Sulawesi Provincial Government.

Freelance Web Developer | Feb 2022 – Jul 2022

- Took paid work while finishing vocational school: landing pages, converting UI designs into HTML and CSS, small Laravel applications, and portfolio sites and templates.

SELECTED PROJECTS

Interactive Mall Directory | Client project, 2026 | Laravel, Alpine.js, Leaflet, three.js, React, TypeScript, MySQL

- Routing avoids corridor segments that cut through units and never passes through the same floor twice. Routes are animated in both 2D and 3D.
- The 3D view is extruded from the 2D floor plans and loaded only when opened, with merged geometry and labels drawn from one texture atlas so it runs on kiosk hardware.
- One installation serves several malls. A signed QR code hands a route to the visitor's phone. Covered by PHPUnit and Vitest suites.

Petakin | Personal project, 2026 | Next.js, TypeScript, Python, FastAPI, OpenCV | petakin.vercel.app

- Browser editor that turns raster mall floor plans into clean SVG unit maps: one path per unit, grouped by category, ready for Figma.

Kikoeru Lab | Personal project, 2026 | Next.js, TypeScript, Supabase, Google Gemini | kikoeru-lab.vercel.app

- Collects user complaints from Hacker News and Reddit, extracts project ideas with Gemini, and ranks them with a deterministic score computed in code. Daily ingestion by GitHub Actions.

SKILLS

Backend: PHP, Laravel, Lumen, Node.js, Express.js, REST API, MySQL, JWT, Repository Pattern, OOP

Frontend: TypeScript, JavaScript, React, Next.js, Svelte, SvelteKit, Angular, Ionic, Alpine.js, three.js, Leaflet, Tailwind CSS

AI: OpenAI API, Anthropic Claude, Google Gemini, DeepSeek, RAG, Prompt Engineering, OCR and document processing, chatbot development

Mobile: Dart, Flutter, BLoC, GetX

Tools: Git, GitHub, GitLab CI, Docker, PHPUnit, Vitest, Playwright, Algolia

Domains: ERP, HRIS, recruitment, loyalty, merchandising, retail wayfinding

EDUCATION

SMK Negeri 1 Cianjur | Vocational Diploma, Software Engineering (RPL) | 2019 – 2022

LANGUAGES

Indonesian (native), Sundanese (native), English (professional working proficiency)

CERTIFICATIONS

Spec-Driven Development with Kiro
